Validate your patient's protection

12 & 120 tests

Diagnostic method: Serology dot-ELISA

A reliable and versatile dot-ELISA IgG antibody titer test, that checks the protective level of immunity in dogs and cats, regarding three core vaccines.

Applications:

- Assist the veterinarian in determining whether adult, senior, immunocompromised, and chronically ill animals should receive the booster vaccine.
- Check the response to the vaccine after the first cycle of vaccination in puppies and kittens.
- Testing animals with an unknown vaccination history.
- Help manage outbreaks in shelters and breeding houses.

Antibody levels assessment with a point-of-care serology test

12 & 120 tests

Diagnostic method: Serology dot-ELISA

A reliable and versatile dot-ELISA serology test, that assesses the antibody levels of infectious diseases in companion and farm animals.

A large portfolio and fast on-site results.

ImmunoComb tests, lead to a more precise diagnosis, assisting in the prognosis and a faster and more accurate treatment.

Benefits:

Results within 23 minutes

Easy to use

Scientific evidence available

Cost effective

Accurate semi - quantitative results

In clinic molecular detection kit easily performed in the comfort of your clinic or laboratory

— 4, 8, 16 & 48 tests

Diagnostic method: DNA & RNA Molecular Detection

Applications:

PCRun® is an isothermal molecular amplification method that is faster, more accessible, and cost-effective than conventional PCR.

With a high sensitivity and specificity, it provides the veterinarian confidence when analysing the results.

Benefits:

Results in 75 minutes

10 minutes hands-on

Easy to read results

Detection of acute infections in companion animals

Does not require expensive devices

Does not require trained personnel

Carried out in the comfort of your clinic

A qualitative point-of-care assay for a fast, and accurate diagnosis

5 & 50 tests

Diagnostic method: Immunochromatographic Assay - Rapid Tests

With the new addition of Biogal's **ImmunoRun panels**, it is possible to have a differential diagnosis between infectious diseases with similar clinical signs.

The practicality in the use and the presentation of the products leads to a rapid and more accurate diagnosis, and treatment plan, increasing the success of a better prognosis one period.

Biogal – Galed Labs

Established in 1986, Biogal–Galed Labs have been at the forefront of veterinary diagnostic breakthroughs. Veterinarians and specialized laboratories utilize our innovative developments and lifesaving diagnostic tools for companion and farm animals.

Our mission is to empower veterinarians to improve their patient's health, using groundbreaking diagnostic test kits. We believe that accurate, easy-to-use, and cost-effective diagnostic testing should be within every vet's reach.
